SJEC-O-ELCP-20230110

**ELEVATOR**

# A Committed, Reliable & Responsible Elevator & Escalator Manufacturer since 1992

**C**ORPORATION DATA  
Land area: 200,000 m<sup>2</sup>  
Manufacturing: 140,000 m<sup>2</sup>  
Test tower height: 140m  
Manpower: 2,700

**A**NNUAL MANUFACTURING  
CAPACITY  
20,000 units of elevators  
10,000 units of escalators and  
moving walks

**I**NTERNATIONAL CERTIFICATION  
ISO9001, ISO14001, ISO45001 by  
DNV, SA8000 by TÜV  
Products Certificates by TÜV

**M**ARKETING  
Products sold over 100 countries  
around the world. Such as Asia,  
Europe, Oceania, Africa, America and  
etc.

## Why Choose SJEC?

### Reliable company

SJEC is responsible company with good management system. We focus on strict design, quality control, and social accountability. We are active and efficient.

### Good products

Our design & manufacture idea is strict in safety, humanized in using, excellent in performance.

### Good service

We provide not only products but also service. SJEC have big team providing almost 7\*24 hours / week commercial and technical service in English, Russia, Spanish, etc.

# SJEC COMPANY profile

SJEC Corporation (SJEC) was set up in 1992 in Suzhou Industrial Park, Suzhou, China, and Specialized in sales, design, manufacturing, installation, maintenance and service of elevator, escalator, passenger conveyor and car parking system.

SJEC is the national company acquired certificate of ISO9001, ISO14001, ISO45001 and SA8000 issued by DNV. All the products have accorded with the CE&EMC certificate issued by TUV in Germany. So far our products have been sold in more than 100 countries around the world.

SJEC has gained a reputation within both domestic and oversea markets for its leading technology and continual innovation ideas.

## SJEC VISION:

To offer global service in consideration of sustainable growth

## SJEC MISSION:

To manufacture quality, safety and environment-friendly elevator products with a motivated team in mind of business-ethnic and innovation to achieve the continuous success.

## Management certifications

○ ISO9001

○ ISO14001

○ ISO45001

## Social Accountability system certification

○ SA8000

## Laboratory certification

○ CNAS / ILAC

## CE certificate

EN81-20/50

EN81-1+A3

## EAC certificate

## NETEC certificate

With more than 30 years efforts ,SJEC focus on updated technology application in high-efficiency, energy saving and green elevator and escalator.

SJEC has gain a reputation both domestic and oversea for its leading technology and continual innovation idea in the world.

1995-2004, Penang factory, Malaysia  
Land area: 10000 m<sup>2</sup>  
Construction area: 5000 m<sup>2</sup>

1995

2005 , new facility in SIP . China  
Land area: 50000 m<sup>2</sup> / Construction area: 35000 m<sup>2</sup>  
Test tower height: 66.8 m

2005

2009, New facility. Landing area:57000m<sup>2</sup> ,  
Construction area:54000m<sup>2</sup> , Test tower height:140m.

2009

1992

1992-2004, Tiger Hill facility, China  
Land area: 43000 m<sup>2</sup>  
Construction area: 21000

2004

2004 , parts supply factory in SIP. China  
Land area: 31000 m<sup>2</sup>  
Construction area: 23000 m<sup>2</sup>

2008

2008, Milan factory, Italy  
Land area: 5200 m<sup>2</sup> / Construction area: 4500 m<sup>2</sup>

2014

2014 New facility,  
Component research and manufacture center.  
Landing area 29996 m<sup>2</sup>/ construction area:31500m<sup>2</sup>.

**MRL elevator**  
(elevator without machine room)

**MRA elevator**  
(elevator with machine room above)

## Advanced Control system

**VVVF driving technology:** Variable-Voltage-Variable-Frequency technology reduces power consumption and improves running precision and leveling accuracy.

**All-IN-ONE design:** highly integrated motor driving and logic control unit, not separated inverter and control board, improve efficiency and reliability.

**Auto-wakeup:** Automatically hibernation will reduce power consumption prominently during elevator standby. Auto-wakeup elevator saves 90% power consumption during standby.

**Energy generation function available:** energy generated during braking feeds back to the power supply could save by 20%~40% energy comparing with traditional braking resistor method.

**EMC design:** our control system fully complies with EN12015, EN12016 standards.

**Smooth running curve:** N-curve algorithm adopts distance control, it automatically calculates possible maximum speed according to different floor distance, makes landing directly without creeping.

## Efficient Driving system

Our elevator uses permanent magnetic synchronized gearless traction machine. It has advantages of environmental protection, energy-saving, free-maintenance, safe reliability, high efficiency, low vibration, low noise and perfect ride comfort. It saves 30%~60% power consume comparing with traditional geared machine.

## Safe in good quality

We use more than 100 protection design including mechanical and electrical to guarantee ultimate SAFETY. All main components we provided are from world-famous manufacturers.

## Excellent performance

We pay much attention on passengers' comfort. It is considered much in design, such as vibration-absorption, smooth running / leveling and friend human-machine interface. Every type of our products shall be installed in our test tower. We use Physical Measurement Technologies Tools to analyze its performance. Before published into market, each of them shall be tested / developed for years until it's excellent and mature.

*Car Style*

Standard car

Wide Car

CEILING: SC-101  
CAR WALL: Painted Steel Panel (RAL7035)  
CAR DOOR: Painted Steel Panel (RAL7035)

## Standard Function

Function	Description
Direct travel leveling	The system automatically calculates and generates the running curves based on the distance, enabling the elevator to directly stop at the leveling position without creeping.
Automatic generation of optimum curve	The system automatically calculates the optimum speed curve compliant with the human-machine function principle based on the distance, without being limited by the number of curves or short floor
Motor auto-tuning	With simple parameter setting, the system can obtain the motor parameters no matter whether the motor is with-load or without load.
Shaft learning	Shaft learning is required before first-time automatic running. During shaft learning, the elevator runs from the bottom floor to the top floor at the inspection speed and automatically records all position signals in the shaft.
Re-running automatically when elevator is re-powered	Elevator will get into normal service automatically without manual operation after power resume.
Floor position auto-correction	Every time when elevator pass leveling plate, floor position pulse will be corrected to theory value got from shaft learning.
Car location adjusted automatically	Every time the elevator runs to the terminal floor, the system automatically checks and corrects the car position information based on slow-down switch 1, and eliminates over travel top terminal or bottom terminal with use of the slow-down switches
Automatic startup torque compensation	The system automatically implements startup torque compensation based on the current car load, achieving smooth startup and improving the riding comfort.
Running times recording	In automatic running state, the system automatically records the running times of the elevator.
Running time recording	The system automatically records the accumulative working hours of the elevator.
Over voltage protection	Once power source voltage exceeds 120%, the motor will be protected against damages.
Phase trip protection	Once power supply is short of any phase or phase reversed, the motor will be protected against damages
Over current protection	Once current output to motor is over a set value, the motor will be protected against damages.
Motor over heat protection	Once motor winding temperature is over a set value, the motor will be protected against damages.
Encoder trip protection	Once encoder has fault, the motor will stop running immediately.
Contact stuck protection	System will monitor the contacts of contactors, if abnormal, the next running will not be allowed until the problem is resolved.
Bidirectional over speed protection	Once lift is running under over speed, lift will be stopped by electrical control system immediately.
Running direction reversal protection	Once the running direction monitored by encoder is not same as actual running direction, lift will stop running immediately.
Travel over time protection	During normal mode running, if leveling sensor signal does not feedback to control system over the set time, motor power will be cut to prevent motor working under abnormal situation.
Final terminal protection	Prevent the elevator from traveling beyond a terminal landing.
Car overload protection	When car load exceeds rated load, lift will hold stop with door open at the floor and the buzzer alarms and overload lighting illuminated.
Anti door lock bridge	Door locks circuit is always monitored. Once door lock is detected be shorted, the lift will be not possible to start next running under normal mode.
Opposite direction car call cancelled automatically	When elevator runs to terminal floors or running direction changes, all registered opposite direction car call will be cancelled automatically to avoid unnecessary running.
Full-load non-stop running	When car load exceeds 80% of rated load, it ignores all hall calls to avoid useless stop and increase the efficiency of transportation. These ignored calls will be registered but responded in next trip (simplex) or by other lift (group control)
Low-speed re-level in case of some fault	When lift stops at the locking door zone by fault, lift will go to the nearest floor under lower speed and open the door.
Next floor if open door faults	If doors can't be opened or can't be fully opened, the lift will close the door and go to the next floor to open the door.
Warning if stop of door zone	The system gives a prompt when the elevator stops at a non door zone area due to faults.
Emergency illumination in car	When normal lighting power supply fails, car emergency lighting on COP will be illuminated by emergency power source.
Fault data recording	Controller will record latest 11 faults information include fault code, time and floor, and it will record the details of last fault.
Emergency alarm	When passenger trapped in car, press the button, the buzzer will alarm.
Automatic car fan	Car fan will be shut down automatically if no more calls are registered after a set time.
Automatic car lighting	Car lighting will be shutdown automatically if no more calls are registered after a set time.
Fire return feedback	Control system could output a signal to building fire alarm system when car reach nominated floor.
Floor number display settable	Floor display number could be set by 0-9, and English letter A-Z ( I and O not available on some type display ).
Automatic returning to parking floor	If no call during a set time, car will return to nominated main floor and wait for new calls.
Car fan manually control	Car ventilation fan could be turned on or off by this key switch on COP. It will be moved into "COP Window" when "COP Window" optional function is selected.

## Alternative and Optional Function

Function	Description
Car lighting manually control	turn on/off the power supply of car lighting
Attendant Operation	Lift will be operated by an attendant.
Attendant Non-stop	Under attendant operation, press this button, lift will ignore hall calls and go to the nearest registered car call floor.
Door open holding button in attendant window	The door keeps open for a set time (adjustable, maximum 1000S) after press this button.
Independent running	When IND switch is turned to "ON", landing calls will be ignored and only car call will be responded. After all car call is responded, car door will be kept opened.
Car call anti-nuisance	Once the registered car calls number is more than 3 plus the passenger numbers weighed by weighting device, all the car calls will be cancelled automatically.
Landing service upon time	It can flexibly set the time periods and corresponding service floors.
Peak service	If car call over 3 from peak service floor during peak service time, elevator will get into peak service, and car call of peak service floor will be always registered, and elevator will return this floor at idle time.
Settable door open time	Door open and close time are automatically adjusted depending on whether the call cause the door open and close is a car call or hall car or door call.
Automatic by-pass jammed hall button	If a hall button is jammed mechanically, this hall call will be automatically bypassed after being served once, until the problem is resolved.
Security floor	During the night security period, the elevator runs to the security floor first every time, opens and closes the door once, and then runs to the target floor.

Function	Description
Arrival gong on car (proposed)	When car arrivals, the audible signal will be given from gong on car top to notice the passengers in the car (different sound for UP and DN). When optional function "Voice synthesizer" is selected, this function is not needed.
Shaft lighting	The shaft will be provided with permanently installed electric lighting.
Arrival gong on landing (customized)	When car arrivals, gong on landing will give the audible signal to notice the waiting passengers on landing (different sound for UP and DN). The gong could be amounted on landing.
Remote shutdown interface	Lift could supply an input interface (remote signal should be dry contact) for parking function, and user could use remote parking switch to put lift out of service or put it into service.
VIP service	One floor can be defined as VIP floor. Landing call of VIP floor will be responded priority to other landings' call.
Video cable in traveling cable	The cable is used for video camera (by others) installed in the car. Cable could be Co-axial cable or CAT5 network cable.
Landing door lock double circuits checked	Landing door main contacts and hall door vice contacts are monitored separately.
Fire return by building fire system	When lift receives a fire alarm signal from the building fire alarm system, it will stop running and directly return to nominated floor with door fully opened and out of normal service.
Audio cable in traveling cable	The cable is used for audio broadcaster (by others) installed on car top.
Earthquake protection	If lift receives earthquake signal, it will stop at nearest floor and open door to free the passenger.
Hall lantern, Shaft cable trunk	It indicates passengers waiting at a floor about the travel direction of arriving car. Shaft cable trunk could be Plastic trunk or Metal trunk (required in case of steel shaft).
Check door lock bridge before exit inspection	When control system switch from inspection mode to normal mode, door lock circuit need to open once, otherwise, control will stay at inspection mode.
Power saving device (regenerative driver)	This device will feedback the energy produced by lift system to the power supply. It could save power about 30% depending on different type and capacity of lift.
Fireman service (phase II)	When fire happened, the lift will be operated by fireman(s), operation controls follow EN81-72.
Car call cancelable	False car call could be cancelled by press the same floor button twice continuously.
Parking key switch	2-position switch on FOB of nominated floor. On "STOP" potion, all registered calls will be cancelled and the lift will go to nominated floor with door open, then close the door and out of service. The cancelled calls will be registered on other lift (if group control). On "RUN" position, lift will be turned back to service.
Fire return switch (Phase I), Remote manual brake release	When fire return switch is activated, lift will stop running and directly return to nominated floor with door fully opened and out of normal service. For MRL lift, brake can be opened remotely by mechanical or electrical device.
ARD (Automatic rescue device while power off)	When power failure, lift will go to the nearest possible floor, open the door and release the passengers automatically. This is a standard function for MRL solution.
UCMP	Unintended car movement protection
Automatic re-leveling	Car move up or down at unlocking zone with door opened to keep leveling accuracy
Pre-opening door	Door will open in advance during stopping to the level.
Button with tactile, Braille, and sound	Push button follows EN81-70
Disability COP	Position of push buttons and indicator follow EN81-70
Voice announcer	Audio information of car operation (arriving floor & running direction) will be announced to passenger. English language as standard, if other foreign language required, voice document in MP3 format should be supplied.
Handrail HC-104	Position and type of handrail follows EN81-70.
Mirror (half height) on rear wall	For wheelchair user to observe obstacles behind them when moving backwards out of the car
Disability FOB	Position of push buttons and indicator follow EN81-70. The indicator shall be separated type, height 1.8-2.5m from floor.
Selective collective	Standard: Full collective (UP & DN hall call buttons on FOB) Option: Down collective (DN hall call button on FOB)
Access control (Security control)	Only after register by IC card, the call(s) could be registered. Which means lift can't be used by passenger without IC card.
Interphone	Standard: 5-terminal: monitoring room, machine room, car top, car and pit.  Option: 3-terminal: machine room, car and main floor. If interphone provided by others, the interface will be reserved as required.  Note: If 4 or more lifts share one monitoring room, center management phone will be used in monitoring room. In case of 4 to 22 lifts, each lift should have a cable from control panel to monitoring room. In case of 23 to 254 lifts, all lifts control panel interphones should be connected into BUS system and then to monitoring room. Cable from control panel interphone to monitoring room is by others. Please consult factory regarding cable specification.
Door safety device	Standard: 2D light curtain Option: a. 3D light curtain, b. 2D light curtain with safety edges, c.3D light curtain with safety edges
Remote monitoring	
4 dry contact interface	System could supply 4 dry contacts to output the basic signals of lift operation including AUTO, INSPECTION, FAULT and PARKING for remote monitoring.
RS485 interface	Lift could supply a RS485 or Intranet communication interface to output all signals of lift operation for remote monitoring. Signals include: 1. status of lift (auto, parking, inspection, fault, fire return, fireman service drive control, attendant, independent, overload, full load, arrival) 2. car location and running direction (floor No., UP, DN, STOP) 3. status of doors (open, fully open, close, fully close) 4. car door position (unlocking zone, locking zone) 5. fault information (fault time, fault reasons)
Remote monitoring system	Monitoring system based on RS485 interface. Same monitor information as RS485 interface. SJEC provide monitoring hardware and monitoring software in PC. Cables between elevator and monitoring room and PC by customer.
